IDENTIFIERS Delaware

ABSTRACT

This report assesses the impact of instruction in online bibliographic database searching on high school students' use of library materials and facilities in three Delaware secondary schools (one public, one parochial, and one private) during the spring of 1984. Most students involved in the analysis were given a brief explanation of online bibliographic searching and instruction in search strategy. They were encouraged to prepare a search request for the topic they had selected for their research assignment. The databases used were selected by a professional librarian. Completed searches, containing documents of potential use to the students, were returned to the students. A critical incident analysis was conducted on the following data: copies of the bibliographies of the student papers (132); questionnaires completed by students in class at the time assignments were due (175); records of student searches (111); and interviews with cooperating school library media specialists (7 teachers and 3 librarians). Following an introduction, discussion of rationale, and description of evaluation design, this report presents observations and implications from data analysis on the following topics: student use of facilities; student material preferences; school library role in delivering documents; age of books used; currency of magazines used; focus of magazine use; use of online references; currency of online references; the most heavily used database; and cost of online searching. Sections on clarifying educational objectives and a summary and recommendations are included. Numerous appendices and tables support the research report. (THC)

ACKNOWLEDGMENTS

The investigation which is the subject of this report is the result of the interest and support of a small number of Delaware citizens who were concerned with the role libraries and schools can play in preparing students to become competent seekers, retrievers and users of information resources. In particular, Nancy Minnich, Director of the Tower Hill School Library was instrumental in bringing the individuals involved in this investigation together. Willard A. Speakman, III, President of the Board of Managers of the Wilmington Institute made this study possible. Nan Nichols, Librarian of the William Penn High School, and Father Tom Hagendorf of Archmere Academy also cooperated in structuring, conducting and interpreting this study.

INTRODUCTION

This report describes the materials and library facilities that students used following instruction in and introduction of online bibliographic database searching in three Delaware secondary schools during the spring of 1984. School settings chosen for this analysis were ones with strong administrative support for their libraries, a history of close working relationships between teachers and librarians, and in which librarians were willing to devote time and effort to this project without remuneration. In addition, the schools selected (William Penn High School, Archmere Academy and Tower Hill School) represented public, parochial and private settings.

The purpose of this study was to describe how putting students in touch with bibliographic information electronically may effect what they do and what libraries can do for them. This is an important consideration at a time when task forces are studying ways to promote library cooperation in Delaware that will cross institutional boundaries. Policies and systems developed should take into consideration demonstrated patterns of library use by specific user groups, such as those in this study. In order to consider how actual patterns of use can be enhanced through cooperation. In order to do this it is essential to know what users are currently doing and how technological developments are effecting their use of specific facilities and materials. In order to assess this, a small number of critical incidents were examined for their impact on student use of libraries and library materials.

At the time that contact was made with the project consultant it was anticipated that:

- all essential equipment for online searching would be in place in each of the schools to be studied;
- the cooperating librarians would have completed training in online searching;
- student instruction in the online process would be conducted; and
- students to be studied would have the opportunity to engage in online bibliographic database searching in order to meet the demands of the particular assignments selected for analysis.

A preliminary meeting for the participating librarians was held at Drexel University, College of Information Studies on March 16, 1984. At that time the objectives of the study were presented; findings from similar studies of students in other locations were discussed; the sample classes from each school were initially chosen; and the data collection procedures were distributed in writing and discussed. Late spring was selected as the appropriate time to gather and analyze data from sample classes. All arrangements for equipment and training were to be organized locally. (See Appendix A for Instructions for Cooperating Librarians.)

In June 1984, the consultant visited each of the cooperating schools and collected the bibliographies of student papers, searches and questionnaires that would be analyzed. At that time, each of the cooperating librarians was interviewed and any problems associated with the study were identified. Major problems and changes in procedure that affected the analysis included:

- delays in equipment installations caused delays in librarian training and meant that most student instruction, regardless of school, was developed and supervised by Carol McCarthy and Nancy Minnich of Tower Hill at the other school sites.
- the decision was made to teach students search strategy in preparation for an online search but to have the searches performed by a librarian located at one of the cooperating schools, rather than by the students themselves.

These changes in the local procedures created an instructional model for analysis that differed in part from the one for which the data collection instruments were originally designed. This was taken into consideration in doing the data analysis and will be discussed at appropriate points throughout this report.

RATIONALE

Various areas of concern must be addressed in assessing the impact of online searching on student use of library materials and library facilities.

Most importantly, evaluation must examine what students do as a result of the instruction they receive from teachers and librarians when online bibliographic database access is incorporated into library skills programs as an addition to instruction in basic manual library skills. What materials do students use in their assignments as a result? Which libraries or other facilities do they use in locating the material that is referenced online? Which databases are most suitable for student information needs? What does this type of access cost? What implications does it have for cooperation among area librarians?

Outcomes of electronic searching may have an impact on materials students seek in libraries. By looking at broad patterns of references retrieved, and patterns of references used, evaluation will reveal how collecting practices could change to support demonstrated use; how weeding might remove materials that are inappropriate because of age or obsolete content; and how area libraries that serve students could focus on cooperative strategies that would improve access.

EVALUATION DESIGN

Data Sources

The evidence for the evaluation suggested above came from examination of what students actually did in response to specific assignments. Students included in this analysis were given, in most instances, a brief explanation of online bibliographic searching and instruction in search strategy. They were encouraged to prepare a search request for the topic they had selected to research for their assignment. (See Appendix B for a copy of the search form used by students and Appendix C for a list of student topics.) The databases used were selected by a professional librarian in the school that provided the training. Completed searches, containing potential documents of utility to them, were returned to the students. In one school, references available from the school library collection were marked as such on the copy of the search returned to the student.

The following critical incident data were collected for analysis:

1. Copies of the bibliographies of the student papers

Analysis of the references in the bibliographies addressed the number, type and age of materials used, as well as describing the characteristics of the references that came from the student's online search. (A copy of the search, if one was performed, was attached to the bibliography.)

Students also indicated on the copies of their bibliographies where materials referenced had been located. Students were not told in advance about this aspect of the analysis. These data were obtained in classes at the time the questionnaires were administered (i.e., when assignments were due.)

2. Questionnaires completed by students in class at the time assignments were due. (See Appendix D for a copy of the questionnaire.)

Analysis of questionnaires indicates the type of facilities used to locate references in papers and the type and degree of help received. This document also solicited answers to questions regarding use of computers to search for information online, and any special ways students gathered information.

Note: The section of this questionnaire addressing use of computers in the search process was developed to query individuals who performed their own online searches. Because of equipment and training problems that developed on site the instructional searching model was changed; therefore, this part of the questionnaire was not considered in the analysis.

3. The records of student searches

All students who prepared an online search request had their searches conducted by a professional librarian at Tower Hill School,

using the search strategy prepared by the student. Completed searches were returned to students and were then attached to the copies of their bibliographies and collected in class at the time the assignments were due. Analysis of these search records described the number, type, and age of references retrieved. (More importantly, student bibliographies were also examined for the presence of any references suggested by the online search.)

4. Interviews with cooperating school library media specialists

These interviews provided data on the librarian's role in supporting the assignments being studied; the librarian's preparation for introducing online searching; opinions on the impact computerized database access would have on services to students; and the preparation and interest shown by teachers for the incorporation of online bibliographic database access into student training. This interview also provided an opportunity to gather information on how materials are selected for the cooperating school libraries, with particular emphasis on the selection and retention of magazines. Data on budgets and hours of service were also included.

Data Analysis Procedures

1. Analysis of the student bibliographies began with classifying and coding the entries on a paper-by-paper basis. The information collected included:

Type of materials -- books, magazines, encyclopedias, pamphlets, etc. The number of each type as well as the total number of references was recorded.

Age of materials -- oldest date, most recent date and median date were recorded for the entire student bibliography and for each type of material.

Special characteristics--these included, but were not limited to, the number of different magazine titles used, as well as the number of magazine references which were indexed by The Readers Guide to Periodical Literature.

Location indications--in what type of library each reference had been located.

The data were keypunched and analyzed using the Statistical Package for the Social Sciences, Version X (SPSS-X). Coding permitted grouping by class, school, or sample as a whole. In addition, specific book, magazine, and newspaper titles used were coded using LisaList and manipulated for analysis purposes.

2. The student questionnaire focused on the facilities which the student had used for the particular assignment being analyzed. This approach, which is called the critical incident technique in survey research, is aimed at obtaining the most factually accurate data. The questions asked for specific information about what the students actually did. The questionnaire was based upon one which has been used successfully to collect this type of data in other studies. Among the topics covered by the first part of the questionnaire were:

- Facilities used in looking for materials. (A list was provided and students checked all appropriate entries.)
- Facilities from which materials were actually obtained. (A repeat of the list mentioned above)
- Libraries in which the staff provided direct assistance to the student.
- Other sources of assistance. (parents, friends, etc.).

A second section of the questionnaire focused on the use of computers in completing the assignment being analyzed. This section was developed based on the assumption that students would be conducting their own searches after they received instruction. Due to problems in librarian

training and equipment delays this instructional model was altered and the actual online searches were, as mentioned above, designed by the students but carried out by a professional librarian in the school with the most experience. This section of the questionnaire was not included in the analysis.

A third and final section of the questionnaire provided space for students to report on any special ways they gathered information. Comments from this section were analyzed.

Questionnaires were coded and analyzed using Microsoft Multiplan, an electronic worksheet program. Coding permitted grouping by class, school, or sample as a whole.

Note: Cooperating teachers completed questionnaires providing background on the assignments and instruction offered to students in information searching and library use.

3. The records of student searches were attached to the bibliographies of those students who had requested online searches and submitted a search request form, including a declaration by the student of a simple search strategy to be followed. (See Appendix E for a copy of the search request form.)

Analysis included assessment of types of materials referenced online: number, type, and age of references from online searches used in student papers (i.e., referenced by the student in the attached bibliography); names and counts of databases used, including time online and cost.

Sample Selected and Units of Analysis

Classes in English, history, and science were part of the sample selected for this analysis. Students were in grades 10 through 12.

*Units of Analysis/Numbers of Responses

<u>Units of Analysis</u>	<u>Number of Responses</u>
Student papers	132
Student questionnaires	175
Teacher questionnaires	7
Student searches	111
Librarian interviews	3

*The difference in numbers of student papers, questionnaires and searches is due to the fact that not every student present in class at the time the data collection was done had a completed paper available. In addition, not all students whose bibliographies were analyzed had requested online searches on their topics.

DATA ANALYSIS: OBSERVATIONS AND IMPLICATIONS

Observation #1: The average student uses three information-providing facilities in meeting the demands of assignments requiring the use of materials other than classroom textbooks.

As Table 1 indicates, students in this study use both school and public libraries in searching for information for their assignments. Collections of materials found at home are also used by more than half (57%) of them. College and university libraries are important to a lesser extent (i.e., used by 27%). If students decide to use a particular type of facility, they are usually successful in finding something they reference in their papers. More than three-fourths of the students who used school, public and home collections found something they referenced from these locations.

The amount of help students claim they receive is an important consideration in developing service plans and instructional strategies to improve performance. The school library is the site of most assistance,

Table 1
Distribution of Student Use of Libraries by Percent
Using Each Type, and Percent of Users Finding
Information, Receiving Assistance from Library Staff,
from Family or Friends, or from Surrogates

N = 175

Type of Library	% of Students Using	% of Students Using who Found Information	% of Students Using who Received Library Staff Help	% of Students Using who Received Help from Family/Friends	% of Students Using who Received Help of Surrogates
School	95 %	86 %	58 %	9 %	0 %
Public ¹	59	79	32	7	0
Community college	5	22	13	0	13
College or university	27	63	29	22	10
Home	57	75	0	3	0
Private ²	3	83	2	0	0
Other ³	17	63	0	0	0

¹ Includes both neighborhood and regional public libraries.

² Private libraries used by students include Wilmington Medical Library; Ashland Nature Center, Audubon Society; L.C.L. Americas; March of Dimes; and a college professor's private library.

³ Other sources used for gathering information include teachers, personal interviews, personal experience, book stores, and pamphlets received through the mail.

See Appendix H for a complete list of students' comments including types of facilities used.

with more than half (58%) of the students reporting they seek assistance there. About one-third of the students get help in public and college libraries; and, of course, no professional help is available at home. This is a particularly interesting finding in light of earlier studies of student use that measured the amount of help received. In studies of student use in which online access was not available, approximately one-third of the students reported receiving help in the school library, public library and college location. This substantial increase in assistance at the school is probably related to this new search technique.

IMPLICATION:

Formal cooperative arrangements among types of libraries in the state is logical since informal patterns of multiple library use have already developed. Union lists of holdings, particularly if they are accessible by subject, would enhance student use of collections. Universal borrowers' cards that would allow students to use any state-supported library would be the most sensible way to take advantage of this usage pattern; one that indicates a willingness to physically go to locations where materials considered of potential use are located. Formal cooperative programs should also include ways to train students to use locational tools with precision.

COMMENTS:

1. Multiple library facility use patterns exist. Students appear able and willing to use a number of different community facilities.
2. Students appear successful in finding information in the locations they try.
3. Since collections of materials found at home are used by more than half of the students, programs for parents should be jointly developed by schools and public libraries working in concert. Such programs could take a two-pronged focus: helping parents to upgrade materials held at home; and eventually training parents in how to use their home microcomputers to help their children locate information electronically.

Observation #2: Students appear to prefer books and magazines in selecting materials to meet the demands of their school assignments. The average student in this study referenced 8 items in his or her paper. The most heavily used types of materials were books (used by approximately four-fifths of the students) and magazines (used by three-fifths of them). The heaviest demand placed on libraries by these students is for books (45% of all references were to books and 82% of the students referenced at least one book). Magazine materials are next in importance (representing 23% of all references and used by 61% of the students). Newspapers and encyclopedias are used by about one third of the students. Government documents and pamphlets are rarely used, and nonprint is virtually unused. Table 2 describes student material usage patterns. (Additional analyses of materials usage patterns are presented in Appendix E.)

IMPLICATION: If library collections that serve students are structured to include materials other than books and magazines these materials must receive more emphasis in student instruction. The most successful way to do this is for librarians to work cooperatively with teachers in developing assignment specifications. Written assignment directions from teachers that require students to broaden their materials usage patterns is the most effective technique.

Comments:

1. Newspaper use that did occur was heavily influenced by data from one school that subscribed to News Bank, a service that supplies back issues of well-known newspapers on microfiche, and another school that held a subscription to the Current Events edition of The New York Times.
2. Use of encyclopedias should be considered by teachers and librarians. Only one-third of the students used encyclopedic sources, even though such sources may be excellent starting points for overviews of subjects being researched.
3. Nonprint collections that are intended to support student research should either be abandoned or brought more strongly to students'

Table 2
Distribution of Types of References

¹ Other references include general reference materials, dictionaries and handbooks (e.g., *Annals of American History*, *Current Biography*, *Dictionary of American History*, and *Social Issues Resource Series*).

² Nonprint references are primarily interviews with one reference to a sound recording.

See Appendix I for a complete listing of the materials referenced by students.

attention. Nonprint was virtually unused by students in this study.

Observation #3: The school library has the heaviest load placed on it for the delivery of all types of documents to students.

Table 3, which indicates where particular references were actually found, can be read in two ways. By reading across the rows it is possible to see what percentage of a particular type of material was found in each type of facility. Reading down the columns shows where the heaviest use of a specific type of material is occurring. Almost half (44%) of the books referenced by students were located in school libraries. The next largest supplier of books (22% of the book references) was the public library. The school library is also clearly most important for magazine access. Approximately half (46%) of the magazine articles were located at school, with other library facilities contributing very few references. Newspaper access is almost completely (79% of all newspaper references) attributed to materials available in the school library. While half of encyclopedia use (46%) is at school, the 17% of encyclopedia references from the home are important to consider. These data support the contention that when students reference older encyclopedias they are, in most instances, using volumes found at home.

IMPLICATION: This data supports the belief that students find most of their materials in their school libraries. This does not mean that other libraries are unimportant to them. Public, home, academic and special collections are used to supplement what the school library holds. Formal cooperative arrangements should build upon and acknowledge this. Providing students with a universal borrower's card (as suggested earlier), that would allow them to use and be responsible to other libraries, is a logical step in improving their access to information. Considering current patterns of use, this would not mean that students become unusually heavy users of collections other than those in their schools.

Table 3

	100 %	100 %	101 %	100 %	100 %	100 %	100 %	100 %

¹ Includes both neighborhood and regional public libraries.

COMMENT:

1. Current patterns indicate that where public libraries are used by students for assignments, it is to borrow books. Cooperative collection development agreements between area school and public libraries could enhance the diversity of what is available.

Observation #4. Students are not sufficiently aware of the age of the materials they use. As Table 4 indicates, only 15% of the books referenced had been published within the last five years. Most references (65%) to books were to titles published before 1974.

IMPLICATION: Training programs for students should emphasize the importance of assessing the currency of information sources. In addition, library collections should be vigorously weeded to remove outdated information. This is of particular financial concern when the idea of entering titles statewide into an access network is being considered. It is wasteful to spend time and money on entering large portions of materials into an electronic network if they are no longer relevant to users.

COMMENTS:

1. This does not mean that materials of an archival or timeless nature can or should be automatically discarded. It does mean that collections specifically geared to school students should be weeded in order to remove and discard obsolete materials as well as identify older holdings that might be of more utility in other publicly-supported collections.

Table 4
The Distribution of Age of Books
Referenced by Students
N = 505 references

Date of Books	% of All Books	Cumulative % of Books
1984	<1 %	<1 %
1983	5	6
1982	3	9
1981	4	13
1980	2	15
1979	4	19
1978	4	23
1977	4	27
1976	4	31
1975	4	35

1959 - 1955	7	91
1954 - 1950	3	94
Before 1950	6	100
No date provided	2	102
	102 %	102 %

Observations #5 and #6 cannot be separated in terms of implications and comments; therefore, they are considered together below.

Observation #5: Magazine use is relatively current and appropriate to the topics being studied by students. As Table 5 shows, approximately three-fifths of all magazine references were to articles within the past five years. When the measure of currency is extended to ten years, almost three-fifths of all magazine references are within this time period. There is, however, sensible use of older articles by students studying historical events.

Observation #6: Magazine usage is focused in a core of popular titles, used over a broad time span. Table 6 indicates how the 256 references to magazines were dispersed across 81 unique titles.

IMPLICATION: Core titles (the top contributors) should be part of every collection serving students and should be held as far back as possible in order to meet the greatest potential use. Peripheral titles (i.e., those not in the core) should be selected for greatest possible area diversity, rather than considerations of the diversity of any single collection.

Comments:

1. Seventeen of the top twenty titles have been identified in earlier studies as core titles. (The three new entries from this list are Grand National Scene, which a student located at home; Editorial Research Reports and Good Housekeeping. The appearance of these three titles in this list of highly used magazines is probably a fluke and these titles should not be considered candidates for core lists.)
2. Union lists of serials should include titles held by schools. School collections examined in this study held some titles unique to individual schools. Such information on title holdings would be useful in a statewide holding list. (See Appendix F for complete lists of magazine holdings in the three sample schools.)

34 thru 81	32 (1x48)	256	100	
	302	302	100 %	

3. Students should have access to serial holdings information if they are to locate essential materials. This is particularly important if they are to use electronic bibliographic databases which include many references to magazines and journals that are not held by their schools.
4. Appendix F contains information in tabular and chart format relating to the magazine holdings of the three sample schools. It would be possible to build similar tabular displays for all libraries within a geographic area. This would provide libraries in an area with a tool to allow them to consider trading incomplete sets in order to build unbroken sets of titles, with holdings information for various locations.

Observation #7: Few of the references that came up online were used by students in their bibliographies. This may be due to the fact that materials retrieved online are either too sophisticated for the student to consider or they are impossible to locate.

Table 7
Inclusion of References from Online Searches
in Students' Bibliographies

N = 132 students

N of References Identified in Online Search Used in Students Papers	% of Students Using	Cumulative % of Students Using
0	84 %	84 %
1	10	94
2	3	97
3	2	99
4	1	100
5	1	101
	101 %	101 %

IMPLICATION: It is essential to monitor the impact of computerized access to bibliographic data if schools incorporate online bibliographic database searching into training programs for students. These data indicate that very few references that come up online are actually used to meet the demands of student assignments.

COMMENTS:

1. Most of the online citations used by students were referenced by students in one school. This was the school that did all of the searching. This school also indicated on their students' search records which materials were available in the school library. This type of strategy may be needed if librarians want students to consider the materials that come up online.

Observation #8: Online references that were used by students were to current materials. As Table 8 indicates, three-fourths of the references were within the past five years; and all online references used were within the past ten.

IMPLICATION: Statewide identification of current holdings, accompanied by arrangements to allow students access to libraries beyond those in their schools, will probably increase student use of current materials.

Comment:

1. Local task forces of librarians should share experiences and strategies for collection development in order to enhance area subject diversity.

Observation #9: The database selected most often by the professional librarian in performing searches for students was a database that covers popular magazine articles (Magazine Index). Two-thirds of all searches were performed using this database.

Table 8
The Distribution of Age of Computer-Generated Materials
Referenced by Students

N = 36 references¹

Date of Materials	% of Materials	Cumulative % of Materials
1984	3 %	3 %
1983	39	42
1982	14	56
1981	14	70
1980	3	73
1979	8	81
1978	3	84
1977	6	90
1976	3	93
1975	0	0
1974	8	101
	101 %	101 %

¹ Most of these materials (86%) were referenced by students in one school.

Table 9
Databases Accessed for Students
N = 193 searches

11	Psycinfo	1
37	Sociological Abstracts	5
93	U.S. Political Sci Documents	1
167	World Affairs Report	1
		102 %

IMPLICATION: At this point in time it is unclear which databases are suitable for the needs of students. In order to focus electronic access strategies in the most cost effective and efficient manner (i.e., select database sources that may have pertinent references for non-adult searchers) it is essential to keep and analyze records of use.

COMMENTS:

1. The recent announcement by H.W. Wilson (November 1, 1984) that Readers' Guide to Periodical Literature is available online should be considered in selecting databases for student access.
2. A log sheet, similar to the one included as Appendix G, should be kept by all school libraries engaging in local online searching.

Observation #10: The average cost of searching using a professional searcher was \$1.31. In a similar study in which students performed their own online searches, the average cost of a search was \$2.56.

IMPLICATION: Although it may cost less to have professional librarians conduct searches for students, this may not be the best educational model to select. The latest developments in end-user searching have demonstrated that accessing bibliographic databases using home computers is possible and probable. If the educational goal for students is to prepare them to become competent and efficient users of computers for bibliographic searching, they will need extended instruction and practice in actually performing searches online in their schools.

Comment:

1. It is essential to develop clear educational objectives for introducing electronic bibliographic database access in schools. A list of possible objectives for consideration of teachers and librarians follows.

Table 10
Cost Statistics Related to Online Searching
N = 111 searches¹

File Number	Database	Total Cost per File for Students' Searches	Average Cost per Search ²	Maximum Cost	Minimum Cost	Median Cost
38	America: History & Life	\$ 8.76	\$ 1.09	\$ 1.86	\$.81	\$ 1.20
5	Biosis Previews	4.35				
163	Career Placement Reg/Student	3.02				
1	ERIC	2.35	1.18	1.43	.92	
40	Enviroline	7.74	1.55	3.62	.78	.92
47	Magazine Index	112.23	1.26	3.02	.81	1.79
11	PsycInfo	3.19	1.60	2.06	1.13	
93	U.S. Political Sci Documents	3.44	1.72	2.29	1.15	
167	World Affairs Report	1.26				

\$ 146.34

*** AVERAGE COST PER SEARCH OVERALL \$ 1.31³

¹ Cost statistics were not available for all searches.

² In some instances, searcher remained connected to the same online file to perform more than one search. This strategy reduces individual search cost.

³ In a similar study in which students performed their own online searches, the average cost of a search was \$2.56.

CLARIFYING EDUCATIONAL OBJECTIVES FOR PUTTING STUDENTS ONLINE

In an age in which information is considered a key ingredient in solving problems and making decisions, it is incumbent upon schools and other publicly-supported information-providing organizations to help students develop competency in locating, retrieving and assessing information to meet both current and future needs. The latest technological development in terms of retrieving bibliographic information is computerized bibliographic database searching, the type of retrieval students in this project were introduced to.

Adding instruction in this aspect of how to search for, assess, and retrieve information to existing training programs designed for students raises a number of issues. One issue that this investigation raised and that must be clarified is whether students should be taught to do their own searching, or whether the student should only receive instruction in the search process, with the expectation that a professional searcher will perform the actual search.

In order to consider the above question it is essential to clarify the reasons for introducing this innovative procedure to students. Educational goals and objectives for putting students online should be clearly articulated in the first place. Potential goals and objectives for such programs are listed below.

Goal #1: TO GENERATE NEW OPPORTUNITIES FOR INSTRUCTION

Objectives:

As a result of instruction, students should :

- a) understand relevant online terminology, including but not limited to Boolean operators, access points and limiting functions;

- b) have a rudimentary knowledge of the thesauri and indexes which are used as a preliminary step to the formulation of a search strategy;
- c) be able to posit a tentative search strategy in terms of Boolean logic upon directed topics in preparation for actual online searching;
- d) be able to narrow or broaden a topic as necessary;
- e) be able to interpret a bibliographic record and evaluate the results received;
- f) observe the execution of their search strategy on a selected database;
- g) conduct and modify a search on selected databases while online;
- h) utilize some of the citations retrieved as research for their assignments; and
- i) be aware of the advantages and disadvantages of online searching.

GOAL #2: TO GENERATE ENTHUSIASM FOR THE RESEARCH PROCESS

GOAL #3: TO EXPAND THE STUDENT'S CONCEPTION OF THE VARIETY OF INFORMATION AVAILABLE

Objectives:

Students should, as a result of instruction:

- a) be acquainted with a variety of available databases and possess an understanding of the selection process and

- b) develop an expanded sense of the universe of available documents on any given subject.

**GOAL #4: TO EXTEND THE STUDENT'S KNOWLEDGE OF THE
DIVERSITY OF INFORMATION-PROVIDING FACILITIES
AVAILABLE**

Objective:

Students should, as a result of instruction:

- a) know how to use all publicly-supported libraries to locate materials.

Training models for students should be developed cooperatively by librarians working with teachers. Programs should be based on an analysis of what is necessary to achieve successful completion of jointly agreed upon goals and objectives. Continued examination of what students actually do as a result of training will provide librarians and teachers with an understanding of how instructional strategies can be modified to improve student performance.

SUMMARY AND RECOMMENDATIONS

This investigation addressed how a purposefully selected sample of high school students in Delaware use library facilities and materials in meeting the demands of their school assignments. In particular, this report looked at the impact of the introduction of electronic bibliographic access on student information seeking behaviors.

The impetus for conducting this study came from a small number of individuals currently part of committees and task forces that are looking at statewide efforts to design library systems that will improve access to information for all citizens of Delaware. Such systems must take into consideration demonstrated patterns of library use by groups such as the one in this study. In order to enhance use through cooperation it is essential to know what users are currently doing and how technological developments may be affecting use of specific facilities and materials.

The following observations, taken from the body of the report, are presented in summary fashion below. (Readers are urged to consider the section on Data Analysis: Observations and Implications for a fuller understanding of this summary.)

- A. Multiple library use facility patterns exist. The average student uses three information-providing facilities in meeting the demands of assignments requiring the use of materials other than classroom texts. The most important facilities are collections of materials located in school and public libraries and at home, with college and university libraries playing a lesser role.

Recommendations:

1. Including schools and school students in formal cooperative arrangements among types of libraries is logical since informal patterns of multiple library use have already developed.
2. Developing statewide union lists of holdings, particularly serials holdings, will enhance student use of all collections.

3. Developing universal borrowers' cards that would allow students to use any state supported library is the most sensible way to take advantage of the usage pattern that exists.
 4. Formal programs of cooperation should include training activities that will help students use newly developed location tools with accuracy.
- B. Students indicate they seek help in libraries, particularly in their school library. More students in this study indicate seeking help in their school libraries than in earlier studies of student use. This may be due to the introduction of electronic access possibilities in searching for information.

Recommendation:

1. The presence of professional help in libraries is as important as the collections available. Students indicate that they can and do seek assistance. This must be kept in mind in considering staffing patterns, particularly in school libraries that are interested in providing access to information electronically.
- C. Format preferences for types of materials exist. Books and magazines are the most heavily referenced types of materials.

Recommendations:

1. If library collections that are specifically geared to students include materials other than books and magazines, these materials must receive more emphasis in student instruction.
2. The most successful way for librarians to influence the variety of materials that students use is to work cooperatively with teachers in developing assignment specifications. (See Observation #2 for discussion of specific types of materials usage patterns.)

- D. Analysis of where individual references were found indicates that the school library supplies most of the materials students use, although other collections are essential in meeting the very broad topic interests of students, such as those in this study.

Recommendation:

1. Providing students with a universal borrower's card (as suggested above) would not mean that libraries other than those located in schools would receive heavy use by students. This innovative approach would, however, be a logical way to broaden the student's idea of what is available and make them aware of how all libraries are organized to meet the needs of users.

- E. Students are not sufficiently conscious of the age of the materials they use. It is not unusual for them to reference items that appear to be dated.

Recommendations:

1. Training programs for students should emphasize the importance of assessing the currency of the items they select.
2. Librarians should be more sensitive to the ages of their collections, and efforts should be made to weed obsolete materials. Weeding activities should be seriously considered since extensive retrospective conversion of collections for access electronically is under consideration.

- F. A core group of magazine titles can be identified and suggested for libraries that serve students.

Recommendations:

1. The core should be held (and held across a broad time span) by all libraries serving students.

2. In order to maximize use, magazines subscription practices should be discussed by area librarians, with emphasis placed on developing area diversity rather than diversity of any single collection.
- G. At this point in time very few of the references that are retrieved in an online search are actually referenced by students in their papers. Many of the items that came up online were too sophisticated to be useful; not present in school library collections; and difficult to locate in other library facilities.

Recommendations:

- I. Use of online references could be improved if students knew where to locate the materials (particularly magazine and journal articles) that are referenced. Statewide lists that provide this type of information would be useful.
- H. The electronic database of greatest use to students at this time is one that covers popular magazines.

Recommendation:

- I. Librarians must be cognizant of the sophistication of the databases suggested to or used for students. In order to build a broad base of experience that other professionals can share, records of use must be maintained and analyzed. One approach is to keep a formal log of online use such as the one suggested in Appendix G of this report.
- I. The average cost of searching when a professional librarian performs the student's search is about half of the cost found in other studies where students did their own searching. This type of retrieval does not, however, provide the student with any actual online experience to translate to other situations or to use in the future.

Recommendation:

1. Educational objectives for putting students online must be clarified and used as guides by teachers and librarians working in concert to build student information seeking skills programs.

The purpose of this report is to assist concerned citizens in Delaware who are responsible for developing information services and programs for students in making decisions about cooperative activities. Decisions should take into consideration current information seeking behaviors. It is hoped that programs developed as a result will prepare students to become more expert at locating, retrieving, assessing and summarizing information. This will mean that educators at the post secondary level will have better prepared students; and that employers in the state will eventually have employees who are more efficient in using available information resources.

APPENDIX A: INSTRUCTIONS FOR COOPERATING LIBRARIANS

Instructions for Cooperating Librarians

1. Prepare 3 x 5 cards with the names of the students who will be participating in this study.
2. Collect the students' papers from the teachers and photocopy the bibliographies only. Do not put the students' names on the photocopies.
3. Paperclip the bibliography and that student's online search printouts, if any, to the 3 x 5 card. Attach a copy of the student questionnaire. These packets of materials — one packet for each student — will be used in your classroom data collection.
4. Schedule a time to explain the study to the class.
5. Take with you to that session:
 1. The packet of materials for each student. Each packet should include:
 - a 3 x 5 card with the student's name
 - a copy of the student questionnaire
 - the student's bibliography
 - the printouts from the student's online search, if a search was performed
 2. A copy of the teacher questionnaire.
 3. A tape recorder to record your comments to the class.
 4. A large, padded brown envelope addressed to Jacqueline Mancall. [See address at end of instructions.]
6. Distribute the packets to the students. Give the teacher the questionnaire he/she is to fill out.
7. Explain what the study is about and why we are doing it. It is important to create a positive atmosphere in which the students will feel comfortable responding to the questionnaire. Below are some suggestions for your explanation:

We are interested in learning about the types of resources students use when writing papers for class assignments and where students find these materials. In particular, we are trying to discover whether there is a difference in the types and locations of resources used if the students have an online search service available to them. We don't know the answer to this question; that's why we're asking you to help us in this study. I will be sending the questionnaires, copies of the bibliographies from your papers, and the printouts from your computer searches to Dr. Jacqueline Mancall at Drexel University in Philadelphia. She will study these data and tell us what she has learned about your patterns of use. We will use her analysis to help us improve our collection and services to you. Before I collect the materials from you, you will be removing the index card with your name. No one will know whose questionnaires, bibliographies and online searches these are.

8. Have the students and the teacher fill out the questionnaires.
9. Have the students identify where they found the material for each reference on their bibliographies. Write the following code on the blackboard:

- A - School Library
- B - Neighborhood Public Library
- C - Large regional public library (Wilmington Institute Library)
- D - Community college library
- E - College or university library
- F - Home or personal library
- G - Private libraries
- H - Other. Please write in type or name of library

Tell students to write the appropriate location code next to each reference in their bibliographies.

10. Have each student remove the 3 x 5 card and STAPLE the questionnaire, bibliography and online search printout together. This is very important. We will produce a better analysis if we can tie a questionnaire, a bibliography and an online search together.
11. Collect the packets and place them, along with the cassette on which you have recorded this session, into the brown envelope and seal it in front of the students. Mail the envelope to:

Dr. Jacqueline C. Mancall
College of Information Studies
Drexel University
Philadelphia, PA 19104

Thank you!

APPENDIX D: STUDENT QUESTIONNAIRE

STUDENT QUESTIONNAIRE

PART ONE: USING LIBRARIES

1. Did you use any of these libraries in preparing your research papers, even if you didn't find any information? Check as many boxes as apply.

- ☐ School library
- ☐ Neighborhood public library
- ☐ Large regional public library (Wilmington Institute Library)
- ☐ Community college library
- ☐ College or university library
- ☐ Home or personal library
- ☐ Private libraries, i.e., those belonging to companies, research organizations, or special groups. Please specify.

- ☐ Other, please specify.

2. Here's the list of libraries again. This time check only those in which you got information you used in your paper.

- ☐ School library
- ☐ Neighborhood public library
- ☐ Large regional public library (Wilmington Institute Library)
- ☐ Community college library
- ☐ College or university library
- ☐ Home or personal library
- ☐ Private libraries, i.e., those belonging to companies, research organizations, or special groups. Please specify.

- ☐ Other, please specify.

3. Did the staff of any of the above libraries help you find information?

☐

Yes

☐

No

If yes, please specify in which types of libraries you received help.

4. Did anyone else, such as a friend or family member, help you use a library by accompanying you and assisting you there?

☐

Yes

☐

No

If yes, please specify in which types of libraries you received this help.

5. Many times friends and family are able to gather information from libraries for students. Did someone use any library for you? (In other words, use it for you without you being present.)

☐

Yes

☐

No

If yes, please specify in which types of libraries were used by someone else for you.

PART TWO: USING COMPUTERS

6. Did any of your friends or classmates use a computer in their search for this assignment?

☐

Yes

☐

No

☐

Don't know

7. Did you use a computer in your search for this assignment?

☐

Yes

☐

No

If you answered "no" to this question, skip to Question 15.

If you answered "yes," please go on to Question 8.

8. Did you search printed copies of an indexing tool or the card catalog before you did your computer search?

☐

Yes

☐

No

9. Please check the box next to the statement below that comes closest to describing your impression of how your computer search overlapped your manual search of printed indexes.

☐

I found all of the same items plus others

☐

I found all of the same items but no additional ones

☐

I found many of the same items

☐

I found a few of the same items

☐

I found none of the same items

☐

Other, please specify _____

Had you already located any of these same items before the computer search?

☐

Yes

☐

No

☐

I didn't find any of the same items in the computer search.

10. Of the references retrieved online in your computer search, how many did you try to locate?
Check as many boxes as apply.

- ☐ Those I thought might be available in the school library
- ☐ Those I thought might be available in the public library
- ☐ Those I thought might be available in a college library
- ☐ All of them
- ☐ None of them
- ☐ Other, please specify. _____

11. If you located any of the references retrieved online, did any of them provide information that helped you write your paper?

☐ Yes ☐ No

If yes, please tell us how: _____

12. Check all the places in which you performed a computer search to gather information for this assignment.

- ☐ School library
- ☐ Neighborhood public library
- ☐ Large regional public library (Wilmington Institute Library)
- ☐ Community college library
- ☐ College or university library
- ☐ Home or personal library
- ☐ Private libraries, i.e., those belonging to companies, research organizations, or special groups. Please specify.

☐ Other, please specify.

13. Check any of the boxes below that indicate how and when you scheduled your computer search for this assignment.

- ☐ Searched during a regular class period
- ☐ Searched during free time (for example, study hall, etc.)
- ☐ Made arrangements to search with school librarian
- ☐ Made arrangements to search at a public library
- ☐ Made arrangements to search at a college library.
- ☐ Searched at home
- ☐ Searched at a friend's house.
- ☐ Other, please specify.

14. Please check all the people who assisted you with your computer search (by helping you with either writing the strategy or doing the search online)

- ☐ Classroom teacher
☐ School librarian
☐ Public librarian
☐ College librarian
☐ Friend
☐ Relative
☐ Other, please specify.

PART THREE: OTHER WAYS OF GATHERING INFORMATION

15. Please comment on any other ways you gathered information. For example, did you interview people or write for information? List what you think was useful to you.

APPENDIX H: STUDENTS' COMMENTS FROM QUESTIONNAIRES

Questions 1-5. Did you use [find information in, receive help of staff, friends, family or surrogates in] any of these libraries.

Private, please specify:

Student's comment

March of Dimes

Other, please specify:

Student's comment

Books from library of teacher

My content teacher has many books that I used.

My sister's college texts from Drexel University

Books from friends & teachers

Friend's library at home

I had an Interview with a victim.

Art Room

Received books from my content teacher

Interview

Information from someone who help to run the games

Question 1-5. Did you use [find information in, receive help of staff, friends, family or surrogates in] any of these libraries.

Private, please specify:

Student's comment

Haverford College history professor's private library

Wilmington Medical Library

Ashland Nature Center, Audubon Society

I.C.I. Americas

Other, please specify:

Student's comment

Teacher

From a teacher

Teacher

History teacher's library

Teacher's library

Mr. Ten Broeck

Mrs. William's collection of science magazines

Sent away for booklet

Some of it from teacher in school.

Interviews

Someone's quote

I witnessed a child who was abused by his mother. She never bathed, fed or looked after her son. She also beat him.

Books from Hodgson Voc.-Tech.

Pamphlets at a book store

Question 11.

If you located any of the references retrieved online, did any of them provide information that helped you write your paper? If yes, please tell us how:

Student's comment

-bibliographical information

-full article printouts

Sources from family and friends

It supplied me with more information, supporting evidence, and examples.

The magazine articles helped me tremendously.

Helped for thesis

In additional information

A few good insights and some statistics that were helpful.

Facts and an editorial relating to my subject.

Most references provided an overview from different perspectives, plenty of hindsight.

Gave me additional information on my topic

Background information

Recent speculation

Much of my knowledge came from these references

Facts -- mostly was my paper

Gave me additional information

There were several microfilm articles that gave useful information.

Helped me with my paper

More information on subject found through search

I read it & got info

They dealt with my thesis directly.

Some gave insight to the paper and were actual cases exactly about my subject.

Info from the compact of New York Times Magazine

Question 11. If you located any of the references retrieved online, did any of them provide information that helped you write your paper? If yes, please tell us how:

Student's comment

They told me more information in a faster and easier way to acknowledge.

Guided me in my writing

It gave me some newspaper articles that I never seen or heard.

Question 15.

Please comment on any other ways you gathered information. For example, did you interview people or write for information? List what you think was useful to you.

Student's comment

I just looked up information in the books at the library.

Got help from friends, athletes, family and my content teacher
"PDQ" information phone number ("Phone Difficult Questions")

My sister got me information.

All information gathered from libraries. The device most useful to me was the card catalog.

Mostly, in dealing with a literary analysis I spoke with teachers - beyond that, all my research was library oriented.

Used books at home

Just used books

I found that information pamphlets were useful.

Sorry, no other revolutionary means used.

I used the Reader's Guide to Periodical Literature & that helped me find magazine & newspaper articles & the card catalogue.

I interviewed my content teacher about life in Northern Ireland which helped a great deal. I was able to clarify information I was not sure of and also get a basic feel of life in Northern Ireland.

History texts

I checked the card catalogue and found books for background information, then perused the Reader's Guide to Periodical Literature and found a majority of my sources.

Private letters from a primary source were useful.

I talked to teachers (Spanish) and people with knowledge of the subject I was dealing with.

I used books, encyclopedias, and magazines.

I used only books, magazines, and encyclopedias. I did gain some information by watching a television special.

The verticle [sic] file at my neighborhood library was very helpful, also the computer card catalog at Dartmouth University helped a lot also.

I only used books, periodicals and encyclopedias.

I only went thru [sic] encyclopedias and books written on the

subject. I also used magazine articles.

Newspapers.

Just got it out of books.

I wanted to find out as much as I could about child abuse so I watch TV programs and talked to people besides my actual writing for the paper.

My father had many books on John F. Kennedy which I used.

No, just my personal knowledge on how to use the library.

Newspaper article [sic] from the News Journal. Opinions of newscaster and other people (friends, school mates, etc.)

No - just personal knowledge of how to use the library.

Talked with Art teachers, my mom who knows a lot about Art History, got books from friends.

By watching television programs related to my subject matter and discussing the matter with others.

Card catalog, friends references, found books from footnotes in other books

Interview

Talking to someone who knows the topic was useful

I look in the card catalog and got books from my school library.

I just used library books.

I only used books from the library, only 1 reference (encyclopedia) book

I used the card catalog, reader's index

Basically I gathered information from libraries - novels, encyclopedias, periodicals & historical accounts

I wrote for information.

Writing to N.A.S.A. Card catalog.

Question 15.

Please comment on any other ways you gathered information. For example, did you interview people or write for information? List what you think was useful to you.

Student's comment

I used the English teacher's books to work my paper.

Books

Card catalog

Reading

We used the school and public libraries and the books used in our report were ones found in the card catalog not by the computer search.

We used the school and public libraries and the books we obtained there -- the computer search didn't come up with anything for us.

Card catalog, encyclopedias, microfiche

I tried to use microfilm, but it wasn't useful for my topic.

Talked to teacher, went to many libraries.

Knowledge of parents

Information in U.S. History class. Interview with father.

I located most of my information through the card catalogue but did some background work with New York Times microfilms.

Found major books on my topic in the school and college libraries.

Used card catalog, and went to where I found my first book, which turned out to be the only place I got any information in book form. There were 3 other books on my topic on the same shelf. Also I used the New York Times on microfilm.

I used microfiche and books.

Card catalog boxes in school library

I only used the school library in order to gather information. I didn't think anything else would help.

New York Times microfilm useful

Used books and articles found from database

Research of printed indexes and microfilm

My previous knowledge of my topic was helpful.

Reading the New York Times on microfilm

Microfilm

Dictionary of American History

New York Times Index, card catalog, suggestions from family, classmates and librarian

New York Times reference books

New York Times reference books, encyclopedias, books

The only other information I got was from reading some books not mentioned on the search.

No -- not this particular paper, but others I have had to call democratic headquarters for information since I couldn't find it anyplace else.

1. Microfilm Index
2. Annals of American History
3. Card catalog
4. Help of librarian

I used microfilm

Microfilm

Encyclopedia & Dictionary of History

Books - reference

Primary source materials and microfilm

Searched thru [sic] card catalogue and periodical guide, looked for books recommended by teacher

I also looked in microfilm, annals of American History -- these were very helpful in giving me primary sources.

I also gathered information by going to the Black history section of the library (school) and choosing books that looked useful.

I only used reference sources.

Reader's Guide

Used Reader's Guide

Interview, wrote to the Audubon Society

I just gained info from magazines computer search. (I found a few.)

Question 15. Please comment on any other ways you gathered information. For example, did you interview people or write for information? List what you think was useful to you.

Comment

All of it was. Computer, SIRS, magazine articles and books.

Reading in book and writing in own words about what you read.

Interviews with people who had anything to do with my subject.

The microfich [sic], card catalog, Readers Guide, SIRS

I do not write for information, but my friend told about a couple of magazines on rape like Time, and Ebony the story about Maya Angelou that was very useful for me

Took someones quote

Used some of my personal books

Used school library

As before, I used knowledge of my own about child abuse.

I interviewed people, wrote of some of my experiences.

I only need to get books and ect. [sic], from my school library.

I looked in the Readers Guide for different magazines.

Encyclopedias, marijuana books. Health books. Microfich [sic] machine.

I thought the school library was very useful to me.

I think mostly was mags. and the newspapers were mostly were [sic] I got my information.

I used a autobiography

Used a book

Gathered from home library

SIRS

The library was useful and all the books had helped a lot. I did see a couple of programs on tv to help me with my report.

SIRS, encyclopedia, mags, newspapers

Books, papers, phamplets [sic] & magazines.

I used a science book from 7 grade It help me a lot, and the world Book Encyclopedia. A for alcohol

Magazines and books

Books Original Hendrix by Steve Trasnis
Hendrix by Richard Daniels
Hendrix Chappel music company
I used my books and maglazines [sic]
My uncle's books about volcanoes
I interviewed people
Wrote to an association
I had a couple of pamphlets with statistics in them.
Interview of two people
Took a school survey
I gathered most of my information from the Unit I School Library.
Everything that was avlable [sic] to me came in good use.
